**Medicine Is War** Apr 24 2022 Examines how literature mediated a convergence of militarism and medicine in Victorian culture that continues into the present via a widespread martial metaphor. Medicine is most often understood through the metaphor of war. We encounter phrases such as "the war against the coronavirus," "the front lines of the Ebola crisis," "a new weapon against antibiotic resistance," or "the immune system fights cancer" without considering their assumptions, implications, and history. But there is nothing natural about this language. It does not have to be, nor has it always been, the way to understand the relationship between humans and disease. *Medicine Is War* shows how this "martial metaphor" was popularized throughout the nineteenth century. Drawing on the works of Mary Shelley, Charles Kingsley, Bram Stoker, Arthur Conan Doyle, and Joseph Conrad, Lorenzo Servitje examines how literary form reflected, reinforced, and critiqued the convergence of militarism and medicine in Victorian culture. He considers how, in migrating from military medicine to the civilian sphere, this metaphor responded to the developments and dangers of modernity: urbanization, industrialization, government intervention, imperial contact, crime, changing gender relations, and the relationship between the one and the many. While cultural and literary scholars have attributed the metaphor to late nineteenth-century germ theory or immunology, this book offers a new, more expansive history stretching from the metaphor's roots in early nineteenth-century militarism to its consolidation during the rise of early twentieth-century pharmacology. In so doing, Servitje establishes literature's pivotal role in shaping what war has made thinkable and actionable under medicine's increasing jurisdiction in our lives. *Medicine Is War* reveals how, in our own moment, the metaphor remains conducive to harming as much as healing, to control as much as empowerment. Lorenzo Servitje is Assistant

Professor of Literature and Medicine at Lehigh University. He has published several books, including *Syphilis and Subjectivity: From the Victorians to the Present* (coedited with Kari Nixon); *Endemic: Essays in Contagion Theory* (coedited with Kari Nixon); and *The Walking Med: Zombies and the Medical Image* (coedited with Sherryl Vint).

Proposal To Establish A Resilience and Sustainability Trust Aug 05 2020 The challenges from the pandemic, spillovers from geopolitical shocks, and long-standing structural problems pose an enormous impediment for balance of payments stability and resilient and sustainable growth, especially for low-income and vulnerable middle-income countries. The \$650 billion SDR allocation in August 2021 has helped support economic stability by supplementing members' reserves. There is scope to amplify the effect of these SDRs by channeling them from countries with strong external positions to countries where the needs are the greatest.

Access Cookbook Jun 14 2021 Not a reference book, and not a tutorial either, the new second edition of the highly regarded *Access Cookbook* is an uncommonly useful collection of solutions to problems that Access users and developers are likely to face as they attempt to build increasingly complex applications. Although using any single "recipe" in the book will more than pay back the cost of the book in terms of both hours saved and frustration thwarted, *Access Cookbook, Second Edition* is much more than a handy assortment of cut-and-paste code. Each of the "recipes" examine a particular problem--problems that commonly occur when you push the upper limits of Access, or ones that are likely to trip up a developer attempting to design a more elegant Access application--even some things you never knew Access could do. The authors then, in a clear, accessible, step-by-step style, present the problems' solution. Following each "recipe" are insights on how Access works, potential pitfalls, interesting programming techniques that are used in the solution, and how and why the solution works, so you can adapt the problem-solving techniques to other similar situations. Fully updated for Access 2003, *Access Cookbook, Second Edition* is also one of the first books to thoroughly explore new support for .NET managed code and XML. All of the practical, real-world examples have been tested for compatibility with Access 2003, Windows XP, and Windows Server 2003. This updated new edition also covers Access and SharePoint, Access and SmartTags, Access and .NET; and Access and XML. Access power users and programmers at all levels, from the relatively inexperienced to the most sophisticated, will rely on the *Access Cookbook* for quick solutions to gnarly problems. With a dog-eared copy of *Access Cookbook* at your side, you can spend your time and energy where it matters most: working on the interesting facets of your Access application, not just the time-consuming ones.

**The Reinforcement Sensitivity Theory of Personality** Jul 16 2021 One of the major neuropsychological models of personality, developed by world-renowned psychologist Professor Jeffrey Gray, is based upon individual differences in reactions to punishing and rewarding stimuli. This biological theory of personality - now widely known as 'Reinforcement Sensitivity Theory' (RST) - has had a major influence on motivation, emotion and psychopathology research. In 2000, RST was substantially revised by Jeffrey Gray, together with Neil McNaughton, and this revised theory proposed three principal motivation/emotion systems: the 'Fight-Flight-Freeze System' (FFFS), the 'Behavioural Approach System' (BAS) and the 'Behavioural Inhibition System' (BIS). This is the first book to summarise the Reinforcement Sensitivity Theory of personality and bring together leading researchers in the field. It summarizes all of the pre-2000 RST research findings, explains and elaborates the implications of the 2000 theory for personality psychology and lays out the future research agenda for RST.

Next Generation Society Technological and Legal Issues Oct 07 2020 Recent developments in information and communication technology (ICT) have paved the way for a world of advanced communication, intelligent information processing and ubiquitous access to information and services. The ability to work, communicate, interact, conduct business, and enjoy digital entertainment virtually anywhere is rapidly becoming commonplace due to a multitude of small devices, ranging from mobile phones and PDAs to RFID tags and wearable computers. The increasing number of connected devices and the proliferation of networks provide no indication of a slowdown in this tendency. On the negative side, misuse of this same technology entails serious risks in various aspects, such as privacy violations, advanced electronic crime, cyber terrorism, and even enlargement of the digital divide. In extreme cases it may even threaten basic principles and human rights. The aforementioned issues raise an important question: Is our society ready to adopt the technological advances in ubiquitous networking, next-generation Internet, and pervasive computing? To what extent will it manage to evolve promptly and efficiently to a next-generation society, addressing the forthcoming ICT challenges? The Third International ICST Conference on e-Democracy held in Athens, Greece during September 23–25, 2009 focused on the above issues. Through a comprehensive list of thematic areas under the title “Next-Generation Society: Technological and Legal issues,” the 2009 conference provided comprehensive reports and stimulated discussions on the technological, ethical, legal, and political challenges ahead of us.

legal issues that might arise during your command. The purpose of your actions should be to preserve the legal situation until you can consult with your servicing Judge Advocate. However, like most aspects of your command responsibilities, you can fail if you just wait for things to come to you. You need to be proactive in preventing problems before they occur. In the legal arena, this means establishing and enforcing high standards, ensuring your Soldiers are fully aware of those standards and properly trained to comply with them. You must also properly train your Soldiers on all Army policies and higher level command standards so that they also understand and comply with them. Soldiers must also be well-versed in the Army Values and be able to apply those values to real-world situations, which will usually keep them well within legal bounds.
