Foundations of Sensation and Perception Aug 14 2021 Do

you wonder how movies – sequences of static frames – appear to move, or why 3-D films look different from traditional movies? Why does ventriloquism work, and why can airliner flights make you feel disoriented? The answers to these and other questions about the human senses can be found within the pages of Foundations of Sensation and Perception. This third edition maintains the standard for clarity and accessibility combined with rigor which was set in previous editions, making it suitable for a wide range of students. As in the previous editions, the early chapters allow students to grasp fundamental principles in relation to the relatively simple sensory systems (smell, taste, touch and balance) before moving on to more complex material in hearing and vision. The text has been extensively updated, and this new edition includes: a new chapter devoted to attention and perception over 200 new references over 30 new figures and improved, more colorful, visual presentation a new companion website with a range of resources for

students and lecturers The book contains a range of pedagogical features, including tutorial sections at the end of each chapter. This distinctive feature introduces areas of the subject which are rarely included in student texts, but are crucial for establishing a firm foundation of knowledge. Some tutorials are devoted to more advanced and technical topics (optics, light measurement, Bayesian inference), but treated in an accessible manner, while others cover topics a little outside of the mainstream (music perception, consciousness, visual art). Foundations of Sensation and Perception will enable the reader to achieve a firm grasp of current knowledge concerning the processes that underlie our perception of the world and will be an invaluable resource for those studying psychology, neuroscience, and related disciplines.

Killer Verse Mar 21 2022 Killer Verse: Poems of Murder and Mayhem is a spine-tingling collection of terrifically

creepy poems about the deadly art of murder. The villains and victims who populate these pages range from Cain and Abel and Bluebeard and his wives to Lizzie Borden, Jack the Ripper, and Mafia hit men. The literary forms they inhabit are just as varied, from the colorful melodramas of old Scottish ballads to the hard-boiled poetry of twentieth-century noir, from lighthearted comic riffs to profound poetic musings on murder. Robert Browning, Thomas Hardy, W. H. Auden, Stevie Smith, Mark Doty, Frank Bidart, Toi Derricotte, Lynn Emanuel, and Cornelius Eady are only a few of the many poets, old and new, whose work is captured in this heart-stopping—and criminally entertaining—collection.

Astrobiology: Future Perspectives Sep 03 2020

Astrobiology, a new exciting interdisciplinary research field,
seeks to unravel the origin and evolution of life wherever it
might exist in the Universe. The current view of the origin of
life on Earth is that it is strongly connected to the origin and
evolution of our planet and, indeed, of the Universe as a
whole. We are fortunate to be living in an era where
centuries of speculation about the two ancient and
fundamental problems: the origin of life and its prevalence in
the Universe are being replaced by experimental science. The
subject of Astrobiology can be approached from many
different perspectives. This book is focused on abiogenic
organic matter from the viewpoint of astronomy and
planetary science and considers its potential relevance to the
origins of life on Earth and elsewhere. Guided by the review
papers in this book, the concluding chapter aims to identify
key questions to motivate future research and stimulate
astrobiological applications of current and future research
facilities and space missions. Today's rich array of new
spacecraft, telescopes and dedicated scientists promises a
steady flow of discoveries and insights that will ultimately

lead us to the answers we seek.
